

DATA ASSESSMENT & ANALYSIS

D1

Check your energy data consistency, ensuring that the information collected is of the highest quality and reliability for optimal participation in the energy market.

Performance evaluation

We utilize industry-leading metrics such as Customer Baseline Load (CBL) and Root Relative Mean Squared Error (RRMSE) to evaluate the performance of your models for most accurate results.

Anomaly-proof model

Through rigorous data assessment, we identify and address any potential anomalies, outliers, missing values, enhancing the robustness of our models and minimizing the risk of biased results.

API documentation

Regardless of your role in the enterprise, our clear and concise guides guarantee seamless integration of Data Analysis Server into your workflow with user-friendly and comprehensive API documentation.
